The Lockheed Electronics Company, Inc.

1501 U.S. Highway 22, C.S. #1, Plainfield, New Jersey 07061-1501 (201) 757-1600

3 November 1986

As per your request over the telephone for information on with OMB for yourself and 1 present the following.

As per your request over the telephone for information on our meeting with OMB for yourself and 1 present the following. The meeting took place on Friday, 24 October 1986 with OMB representatives Arnold Donahue and Russell Neely. LEC gave a presentation on its general office automation and communications capabilities. Included in this were slides on the AFS program. OMB had specific questions about the AFS, some of which were answered while others were referred to your office. Those that were answered included:

- 1. Where and how do the field bureaus get their information?
- 2. How many bureaus are there?
- 3. Is the headquarters equipment being installed?
- 4. What is LEC's real involvement and how are they different from LMSC?
- 5. Why was the HQ Unclassified system accelerated?

Questions that were answered superficially or referred directly to your office were as follows:

- 1. What is the need for softcopy? What are the number of users? What is being planned? What is the viability of softcopy? Isn't everything presently sent out on wire service now? Do you really need JPRS on softcopy?
- What are we doing to automate P&PD?
- 3. Why didn't SAFE want JPRS products?

If you have any further questions on these please contact myself or Denis at your convenience.

Sincerely,

Richard Lipnick
